Animal families

Look at this of rabbits. They look very different from their parents! But soon their eyes will open and their fur[1] will grow. As they get older[2], the rabbits in a litter will look similar to each other, but not identical, The have some from their mother and some traits from their father. They may have the same fur color as their mother, or their father - or a mix[3] of the two.

Soon their ears will start to grow, too. Having long ears is a key of a rabbit. Why do rabbits have long ears?

Rabbits have lots of [4] - bigger animals that hunt[5] and eat them. The long ears help rabbits to hear well. Their ears can move, so the rabbit knows where a sound is coming from. The long ears also help the rabbits stay cool[6] in hot weather, or keep warm[7] in cold weather. So, long ears are very important for a rabbit's . Over time, rabbits with longer ears become safer and healthier. They could live for longer and have more litters. They passed this trait to their offspring, and rabbits to have long ears.

All have to adapt to their environment. All of animals and plants have their own characteristics and behave[8] in ways that help them to survive.

Lesson (7) Adaptation in Plants

Definitions

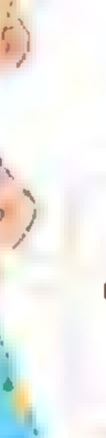

reproduce	have offspring يتكاثر
pollen grains	very small structures that plants use to reproduce حبوب اللقاح
seed	this stays underground and grows into a plant بذرة
cell	the smallest part of an organism خلية
bulb	this is produced when the pollen grains mix with cells in a new plant بصلة النبات ([illegible])

No, they don't.
لا.

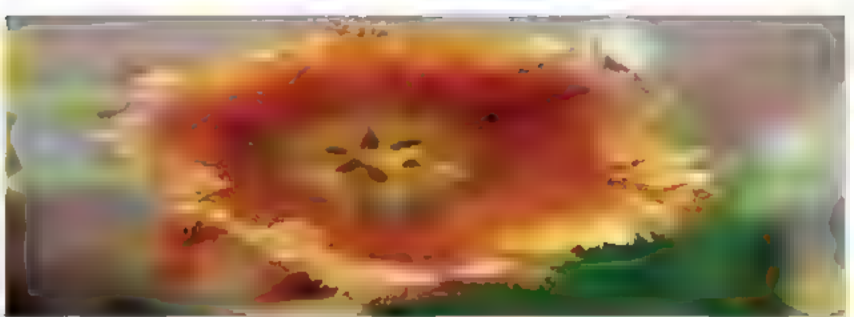

Which plant has adapted to eat insects?
أي النباتات تكيفت على أكل الحشرات؟

Pitcher plants have adapted to eat insects.
تكيفت نباتات الإبريق على أكل الحشرات.

Lesson 7

Look, read and trace.

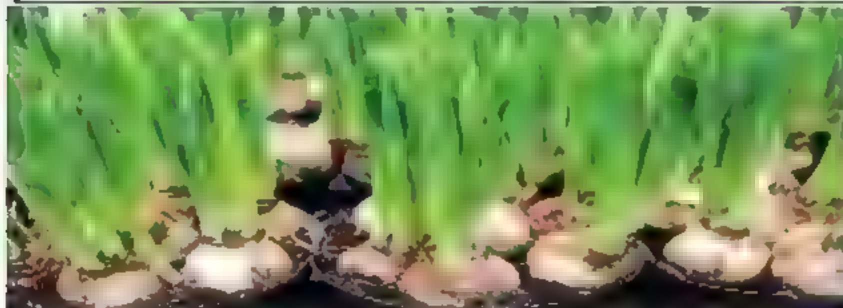

We know that animals have offspring, and adapt to their ______(1). We can see the same in plants around the world, too. Plants are living organisms, and they also ______(2) and adapt. Like animals, they pass on traits to their offspring.

The ______(3) traits that plants pass on to offspring ______(4) the color of the flower, the shape of the flower, the shape of the leaf, and the height of the plant, etc.

Plants reproduce in two ways. Most plants are flowering plants. The flowers produce ______(5) – very small structures. They are carried by insects, birds or the wind to other plants. When they are taken to another plant of the same type, the pollen grains mix with cells in the new plant to make seeds. When these seeds fall to the ground, they can grow into a new plant. This new plant will inherit traits from both the parent plants. It will be the same type, but it might have small differences.

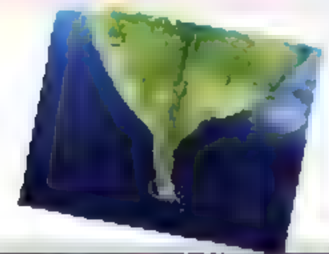

Other plants reproduce on their own by producing an ______(6) of themselves. These plants can produce ______(7) which grow under the ground. The offspring plant only inherits traits from one parent plant, and it will have the same characteristics in leaf shape and ______(8) as the parent plant.

Look, read and trace.

There is an incredible[1] variety[2] of plants on Earth. There are tall trees in the rainforest[3], cactus[4] plants in the desert, water lilies in ponds, and many wild plants and flowers that we see every day around us. They are all different, and they adapt to their environment in amazing ways.

Rainforest plants

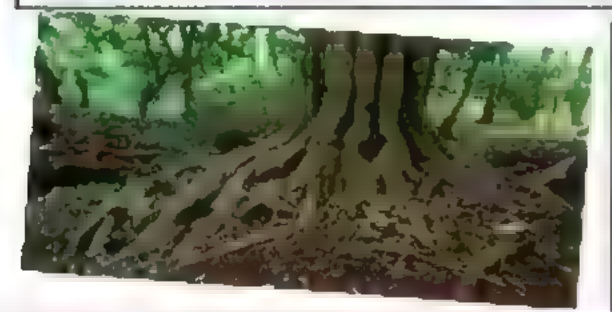

Drip tip leaves

Rain falls off this shape of leaf quickly. The leaf stays strong even if there is a lot of rain.

Pitcher plants

These plants use bright colours[5] to attract insects. The insects fall into the hole of the plant and they can't get out. The plant can turn the insect into food!

Strong roots

Rainforest trees are very tall, but these [illegible] roots sit above the ground and make the tree strong.

Water plants

Water lily

The water lily[6] has flat[7] leaves to stay on the surface of the water, and a long stem under the water that doesn't break.

Desert plants

Date palm

The date palm[8] has deep roots to get water from underground, and big leaves at the top to give shade[9] to the rest of the tree.

Countable nouns are nouns that can be singular or plural. (We can use numbers with them.)

الأسماء التي تعد هي الأسماء التي لها مفرد وجمع.

e.g.

one cup → two cups
a book → three books
an apple → four apples

Uncountable nouns are nouns that we cannot count. There is no plural. (We cannot use numbers.)

الأسماء التي لا تعد هي الأسماء التي لا يمكننا عدها وليس لها جمع.

e.g. water - clay - cloth

We can count

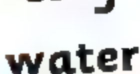

books

sculptures
portraits
bowls
tools

pens

- There are *five* pens.

We can't count

clay
water

wood

metal
cloth

paper

- I can see *some* paper.

Lesson 3

some & any

- We use some in affirmative sentences. نستخدم some في الجمل المثبتة.

e.g. I've got some books.
We're drinking some water.

- We use any in negative sentences. نستخدم any في الجمل المنفية.

e.g. There isn't any wood.
There aren't any pens.

We use some / any before countable (plural) and uncountable nouns.

How many? & How much?

We use (How many?) to ask about numbers. كم للعدد

How many + a plural noun?

e.g. How many bracelets are there?
- There are three bracelets.

We use (How much?) to ask about quantity. كم الكمية

How much + an uncoutable noun?

e.g. How much water is there? - There is a lot of water.

Notice: We use a lot of كثير من/enough كاف before countable (plural) and uncountable nouns.

e.g. - There is a lot of clay. - There is enough water.
- There aren't enough eggs.

1 There is some water. (not)
➥There isn't any water.

Ancient Egyptian art is famous[1] all around the world[2]. Today, we can see paintings[3], sculptures, jewelry and other artifacts from thousands of years ago.

There are many statues and paintings in ancient temples[4]. Because Egypt is a very dry[5] country, the 1
paintings and statues have survived[6] for a long time.

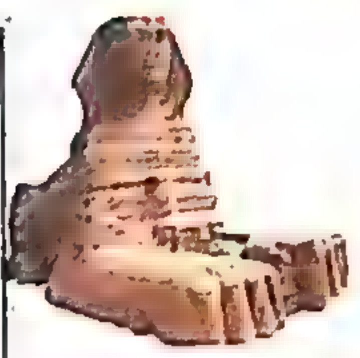

Archaeologists have also found lots of important[7] 2
artifacts in tombs for the Pharaohs[8]. People believed that these artifacts would help them in the afterlife. There were small models of boats, animals, people – lots of things that were important in daily life[9]. Paintings 3
in tombs often showed pictures of the person in the afterlife, too.

Today we can see some of those objects in museums 4
and learn about the past.

6. ظلت باقية / بقيت 7. هام / مهم 8. الفراعنة 9. الحياة اليومية

Ancient Egyptians[10] also made enormous[11] sculptures, such as the statues of Ramses II at Abu Simbel.
They are nearly[12] 20 meters tall. The Great Sphinx[13] of Giza is nearly 73 meters long! The size[14] of these sculptures made them very important and powerful[15].
Small sculptures and artifacts were made, too. These were very detailed and beautiful. Egyptians used precious metals[16] such as gold, as well as wood and colored glass. The artifacts were often colorful. The most popular[17] colors were blue, red, green, black and gold[17].

It can take a very long time to paint or draw a picture. Artists[1] have lots of different styles[2] and ways of working, but one of the basic and most important things to learn is shading[3].

The picture you are drawing is flat, but the object you are copying is three-dimensional[4]. To make it look three-dimensional in your picture, you use shading. This makes a pencil drawing look interesting and real.
You can use hard pencils to draw fine lines, and soft, dark pencils for shading.

You need to know where the light is coming from in your picture so you can add realistic[5] shading.

Look carefully at your object to see the shades of light and dark. You can add shading by doing lots of small lines close to each other, or by rubbing[6] the pencil lines so they mix together.

Hospitals

A hospital is a place where people can go for treatment. Sometimes people have a disease or infection that makes them ill. Sometimes they have an injury because of an accident[1]. At the hospital, you will see a doctor or a nurse. They might ask questions to find out[2] what is wrong with you. They need to know what hurts or how you feel.

They might decide to[3]:

- give you medicine – you drink or swallow[4] this to help you get better[5].
- give you an X-ray to find out if you have broken a bone.
- do surgery – an operation to make a particular part of your body better.
- do a scan to find out the problem if you have a muscle[6] or organ[7] that is sore.

When the doctors know what the problem is, they can decide on the best way to treat you.

What herbs[1] did ancient Egyptians use to treat diseases[2]?

Doctors and surgeons in the past used different medicines to modern ones, but some of their ideas are **useful**[3] today. We can learn about what ancient Egyptians did from two of the oldest **texts**[4] about medicine in the world:

- The Edwin Smith Papyrus is about surgery[5]. Doctors in ancient Egypt could do operations to help people get better after injuries. They could fix broken bones and injuries to the skin.
- The Ebers Papyrus gives treatments for lots of different diseases. It talks about how the heart is the center of the blood supply[6] in the body, and it gives advice about problems with skin, teeth, eyes and other organs.

Some things that ancient Egyptians believed were very different, but we use some of their ideas in modern medicine. For example, they used herbs to treat some diseases, and we know today that these can help – mint is good for the digestive system[7], and aloe can help with burns. They also used **honey** to treat infections and skin problems. With science today, we know honey can make some infections better.

Getting to hospital

Listen and read.

Who are flying doctors?

Flying doctors

When you are sick, you can go to hospital in a car. In an emergency [1], you can go in an ambulance. The people who drive ambulances [2] are called paramedics [3]. They can give you first aid very quickly. Some countries also use helicopters [4] to get people to hospital in an emergency. These are very important and can save [5] lives.

Australia is an enormous country – 7.69 million square kilometers. It has a population [5] of about 25 million people. Most of the people live near the coast [7] around the country. About one third [8] live in the countryside [9], in areas that are a long way from towns and hospitals – sometimes about a six-hour drive. What happens when you are sick? You can call the flying doctors!

The Royal [10] Flying Doctor Service brings medical help to people all over Australia. The flying doctors are pilots as well as doctors. They can help with emergencies or injuries where they happen, and they can fly people to hospital. It is much quicker than traveling by road. The Australian flying doctor service has 77 airplanes. There is a lot of medical equipment inside, and they can be used as hospitals. Doctors can even do operations inside the planes!

The Grand Egyptian Museum

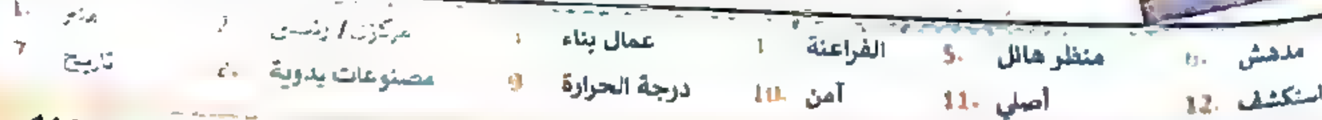

Why was the Grand Egyptian Museum built?

The Grand Egyptian Museum is a very exciting[1], new museum in Giza. It is one of the largest museums in the world. It's around 490.000 m^2, and the central[2] room is big enough to put an airplane inside. There is a huge statue of Ramses II in the room. It arrived at the museum in January 2018. The builders[3] of the museum built a large room around it. There are many more statues of pharaohs[4] displayed on the Great Staircase. From the museum there is also an incredible view[5] of the Pyramids.

The Egyptian Museum in the center of Cairo wasn't big enough to show all the amazing[6] treasures from Egypt's history[7]. Some of the display cases were old. The new museum building has modern display cases which can keep the artifacts[8] at the right temperature[9] so they are safe[10].

There are over 100.000 artifacts inside the new museum, and over 3.000 treasures from Tutankhamun's tomb. The four rooms of Tutankhamun's original[11] tomb were quite small – only 110 m^2. The new museum has a replica of the four rooms of Tutankhamun's tomb, and much bigger galleries to display the treasures in the same order as they were found. There are also photos of the time when people first explored[12] the tomb.

There are video tours that you can watch online. These show you some of the artifacts, as well as some of the different galleries and parts of the building. Many tourists from all over the world want to visit this amazing, new museum.

Lesson 1

Read and trace.

A magnet is a piece of metal[1] that can attract or repel some other metals. Magnets have a north pole and a south pole.

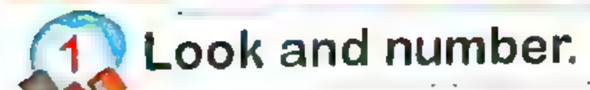

When the north pole of one magnet is close[2] to the south pole of another magnet, they attract. The north pole of a magnet repels the north pole of another magnet, and the south pole of a magnet repels the south pole of another magnet.

A magnetic field is an area around a magnet which can pull objects[3] towards it. We can't see this – it is invisible[4].

A compass can help you navigate. The needle in a compass is a magnet. It always points[5] to the north.

Forces

A force is something that can make things move. Magnetism is a type of force, but there are others:

Push: this moves an object away or forwards - you can push a cart[1] when you go to the store.

Pull: this brings[2] something towards you - you can pull on a door handle[3] to open a door.

Friction: when one object touches another object as it moves, there is a force between them. This is called friction. It can slow down[4] the object that is moving.

Pushing, pulling and friction are contact forces[5]. The two objects have to touch each other for the movement[6] to happen. The contact can stop, start, or change[7] the speed[8] or direction of the movement.

Science: Friction

Look and read.

Friction experiment[1]

Friction is a contact force between two surfaces. We use it every day, from when we put our foot on the ground[2] to run, to when we use an eraser to rub out[3] pencil marks. We can do an experiment to see how friction works.

Roll a toy car down a ramp[4]. Measure how far it travels.

What will happen if we change the ramp? We can put glue and sand on it. If we roll the car down the ramp again, will the distance[5] change?

1. تجربة 2. الأرض 3. يزيل 4. سطح منحدر 5. مسافة

Listen and read.

Are magnets useful in hospitals?

Uses of magnets
Magnets are useful at home and at school. We can stick[1] photos to magnetic surfaces, or use magnets to keep doors closed. But they are important in lots of other ways too.

Medicine
In hospitals, an MRI scan[2] (magnetic resonance imaging) uses a magnetic field to make pictures of organs inside our bodies. An X-ray can take pictures of bones, but an MRI scan can give doctors more information. The scans are very useful and save many lives.

Farming
We know that cows eat grass, but sometimes they can eat bits of metal that are on the ground in fields, such as nails[3] or bits of wire[4]. Framers give cows a magnet to swallow. The magnet stays inside the cow's stomach and attracts all the metal. This stops the metal from damaging [5] the cow's digestive system.

Factories
Big magnets can sort out materials for recycling, or even move old cars.

Computers
Magnets are used to store information in computers. The magnetic areas used for this are narrower than human hair!

Transportation
Some of the most modern train systems use magnets. The train is lifted off the ground, so it has less friction. The magnet keeps it in the right place. The train can travel very quickly!

Lesson 1

1 Look at this website[1], Hana. It's about how people used to communicate[2]. It looks more difficult than communicating today!

3 That's a telegraph machine[3]. It was the first way of sending messages[4] around the world quickly.

5 It used Morse Code[5]. That's a code of short and long clicks [6]. The telegraph machine can send signals[7] along a wire[8].

The Present Passive

We form active statements like this:

تتكون الجملة الخبرية المبنية للمعلوم (Active) من:

Subject فاعل + verb فعل + object مفعول

e.g. We use computers in many offices.

Form To change into passive form: (present passive)

لتحويل الجملة إلى مبني للمجهول في زمن المضارع البسيط نستخدم:

Object + (is / are) + P.P. التصريف الثالث للفعل

e.g. Computers are used in many offices.

e.g. A computer is made of metal, plastic and glass.

Negative

Object + (isn't/ aren't) + P.P. التصريف الثالث للفعل

e.g. A computer isn't made of wood.

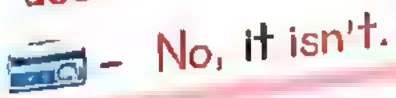

e.g. Emails aren't written with a pen and paper.

Yes/No questions

(Is / Are) + obj. مفعول + P.P. + التصريف الثالث للفعل ....?

e.g. Is it used for sending emails?

- Yes, it is.

The telegraph machine made it easy to communicate with people far away. Before the telegraph machine, many letters were sent. These could take a long time to arrive. Messages sent by a telegraph machine were called telegrams. In telegrams, important information was written and read quickly. They were written in Morse Code. This code was invented by Samuel Morse. The cods was understood by the person who worked in the telegraph office. They wrote the messages on paper. Then the paper messages were delivered to the correct person.

Eventually, telegrams were replaced by other forms of communication. In 1876, the telephone was invented. People could speak directly to people far away.

The first email was sent in 1971. Communication around the world is now quicker than people in the past ever imagined!

Making newspapers

How are newspapers made?

Making a newspaper is very hard work. Journalists, editors and layout specialists have to work very quickly as a team to get the whole newspaper ready in one day.

The five areas that have to work together are news, stories, advertising, production(1) and distribution.

News

Journalists find out the important and exciting things that are happening every day. Some journalists work in the local area of a town or city. Others can travel all over the world. They try to learn as many facts as they can about an event, and interview(2) people who know about it. Then they write the news story and send it to the editor.

1. الانتاج 2. يجري لقاءاً صحفيا

Read and learn.

Stories

Lots of newspapers have articles and stories about general events. These can give people's opinions about the news and events that are happening in the world.

Advertising[1]

Lots of people read newspapers, so it is a good place for businesses[2] to advertise. Newspapers need to have advertisements in them, because they make money from selling space on the page. All the advertisements have to be ready on time to go in the newspaper.

1. الإعلان 2. شركات

Lesson 6

Read [illegible]

Production

When the files are ready, they are sent to the [illegible]. The pages of the newspaper are made into an image on a thin metal plate(1). Then big rolls(2) of paper go through machines over the metal plates.

The newspaper is printed! The printers work all night and make lots of copies of the newspaper. Some modern printers can make 70,000 copies an hour!

Distribution

The newspapers are packed(3) overnight and they are sent to shops all over the country for people to buy in the morning.

اكتب الجملة الرئيسية وادعمها بالتفاصيل ثم جملة ختامية.

- Try to link each sentence to the one that comes before or after it
حاول أن تكون الجملة مترابطة مع الجملة التي تسبقها والتي تليها.

Write a paragraph about the production of a newspaper describing:

1- What happens?
2- Why is it important?
3- What happens next?

The production of a newspaper is a great step. It starts when the files are ready. They are sent to the printing press. The pages of the newspaper are made into an image on a thin metal plate. Then big rolls of paper go through machines over the metal plates.
The newspaper is printed! The printers work all night and make lots of copies of the newspaper. Some modern printers can make 70,000 copies an hour!

Journalists travel all over the world to ______ [1] the news, and we can get the news from lots of different places.

Newspapers[2]:

I'm Bella. My parents buy a newspaper every day. They read the main[3] news stories and lots of other articles.

There is news about sports, too. It's very interesting and there is a lot to read.

TV news[4]:

I'm Adam. In our family, we watch the news on television.

It is live[5] – it is happening at the same time as we watch it. The news can sometimes change very quickly, and on TV we can find things out straight away. Newsreaders[6] present the news and we can watch videos from different places around the country and the world.

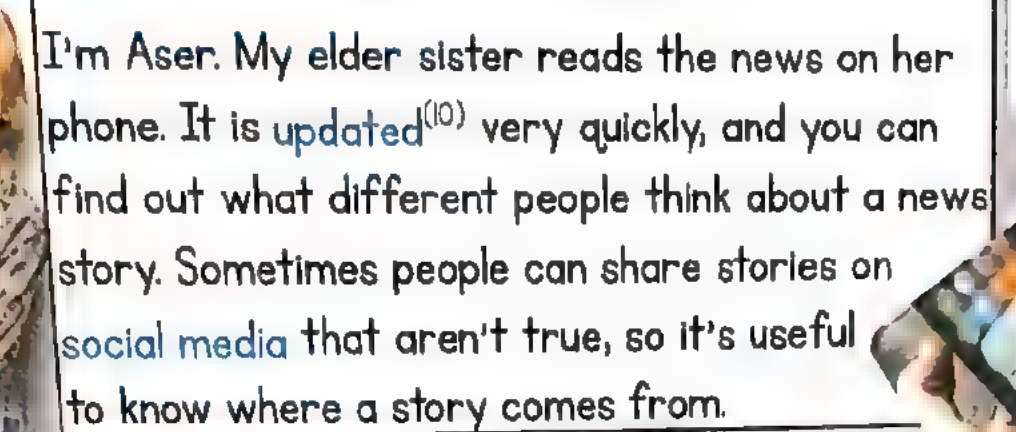

Radio news[7]:

I'm Gamila. My mom likes listening to the news on the radio when she is in her car or at home.

The radio presenters[8] explain everything very clearly. Sometimes people can phone in and ask questions or say what they think in a radio program. It's interesting, but I like listening to music in the car!

Social media(9):

I'm Aser. My elder sister reads the news on her phone. It is updated(10) very quickly, and you can find out what different people think about a news story. Sometimes people can share stories on social media that aren't true, so it's useful to know where a story comes from.
